PROFESSIONAL SUMMARY

Data Analyst (BCA, 2026) trained through an intensive industry data analytics program in SQL, Python, Power BI, Advanced Excel and Statistics. Built 6+ end-to-end analytics projects covering the full data lifecycle — web scraping and collection, cleaning and validation, exploratory data analysis, KPI design and interactive dashboards. Strong at writing complex SQL against multi-table schemas, automating repetitive reporting in Python, and translating analysis into decision-ready recommendations for non-technical stakeholders. Anthropic AI Fluency certified.

TECHNICAL SKILLS

- **SQL & Databases:** MySQL — joins, subqueries, CTEs, window functions (DENSE_RANK, ROW_NUMBER), aggregations, GROUP BY/HAVING, DDL/DML, table and schema design, data modelling
- **Programming:** Python — Pandas, NumPy, Matplotlib, Seaborn for data cleaning, merging, feature engineering and EDA; BeautifulSoup/Requests web scraping; openpyxl report automation; Streamlit apps; Java (basics)
- **BI & Visualisation:** Power BI — data modelling, DAX measures, KPI cards, slicers, gauge and scatter visuals, drill-through pages, executive vs. analyst report layers; dashboard design and storytelling
- **Spreadsheets:** Advanced Excel & Google Sheets — pivot tables, VLOOKUP/XLOOKUP, INDEX-MATCH, conditional formatting, data validation, charting, Power Query basics, Python-driven report automation
- **Statistics & Analytics:** Descriptive statistics, distributions, correlation, outlier and anomaly detection, cohort and segment analysis, trend and pattern identification, data quality and integrity checks, KPI definition
- **Tools & Workflow:** Jupyter Notebook, Google Colab, VS Code, Git & GitHub, MySQL Workbench, Google Workspace, AI-assisted analysis and prompt design (Anthropic AI Fluency certified); currently strengthening Tableau, hypothesis testing and Azure data fundamentals

ANALYTICS PROJECTS

Used-Car Market Analysis — Capstone (Cars24) | Python, Pandas, BeautifulSoup, Regex, Matplotlib

- Scraped and consolidated 4,000+ used-car listings across 4 brands and 4 cities into a single analysis-ready dataset via a repeatable scraping routine.
- Cleaned and standardised raw records with regex rules and Pandas — resolving anomalies, duplicates and inconsistent formats — and engineered features (age, price band, km bucket).
- Analysed pricing and depreciation trends by brand, city, fuel type and ownership, and presented findings in a 25-slide stakeholder deck with actionable pricing recommendations.

Global Superstore Sales Dashboard | Power BI, DAX, Excel

- Built an end-to-end Power BI dashboard with KPI cards, interactive slicers, a gauge visual and drill-through pages, turning a raw sales dataset into self-service reporting for business users.
- Designed dual-layer reporting — executive summary plus analyst drill-down — tracking segment profitability, category performance and delivery timeliness, and flagging loss-making transactions.

Music Store Analytics | MySQL, GitHub — github.com/u200cbvt/Music_store_Management

- Answered 11 business questions on sales, geography and customer purchasing behaviour using joins, CTEs and window functions across a multi-table relational database (Chinook schema).
- Documented query logic and findings in a 20-slide report and published the full project to GitHub.

Customer Churn Analysis — Telecom | Python, Pandas, Seaborn, Google Colab

- Profiled churn drivers across contract type, tenure, service add-ons and billing method using segment and correlation analysis, converting the findings into retention recommendations for high-risk segments.

Personal Expense Tracker | Python, Streamlit — validated data entry, category-wise spend analytics, automated summaries.

TRAINING & CERTIFICATIONS

- Data Analytics Training Program — Innomatics Research Labs, Hyderabad (Excel, SQL, Python, Power BI, Statistics; NASSCOM FutureSkills Prime aligned)
- AI Fluency: Prompt Design and Effective AI Usage — certified by Anthropic | Typing Expert Certification (high-accuracy touch-typing) | Published a Medium article on descriptive statistics

EDUCATION

- **Bachelor of Computer Applications (BCA)** | Elite Degree College, Dubacherla, Andhra Pradesh | 2023 – 2026. Relevant coursework: Statistics, Data Analytics, Database Concepts, Programming Fundamentals
- Intermediate (CSE), 2021–2023 — Elite Junior College, Dubacherla, A.P. | SSC, 2020–2021 — ZPO High School, G. Kothapalle, A.P.

ADDITIONAL INFORMATION

Strengths: Analytical problem-solving, attention to detail and data accuracy, stakeholder communication, documentation discipline
Languages: English (fluent) | Telugu (native) | Hindi (working proficiency) **Availability:** Immediate joiner; open to relocation
